

SKYLARK EXIM — FILM PACKAGE v4

Two deliverables from one shoot:

- 1. **THE HERO FILM** — 2:45–3:10. Promoter-fronted. Yashod is the face. Old Spice grammar, adapted.
- 2. **THE NINE PROCESS FILMS** — 40–65s each. Narrated, no on-camera promoter. Buyer-facing, technical, modular.

Same footage base. Same three shoot days. The hero film is not a cutdown of the nine — it is a separate performance layer shot alongside them.

DECISIONS TAKEN IN THIS DRAFT

Issue in v3	Resolution
No farm / aquaculture chapter	Folded into Step 1: Two Origins . Count stays at nine — the tagline and the on-screen 1–9 numerals depend on it.
Residue testing absent	Now the spine of Step 5 , and the emotional centre of the hero film.
Step 3 spec list unreadable	Rewritten. Taxonomy moved to overlays where it belongs.
"It is not X. It is Y." nine times	Cut to two uses across the whole package (Steps 4 and 7). It lands when it's rare.
harbour / harbor, "frezing", EXIM / Exim	Standardised. UK spelling throughout. Skylark Exim in all body copy; the wordmark can render however the brand book says.
Nine films = 7.5 min, wrong shape for use	Hero film added. The nine become a modular library, not a viewing experience.

Verify before you shoot. Three claims in this script will be checked by any serious buyer, and a film is a permanent record of them: the 700-pallet capacity, the HACCP certification status, and whether the cold store is owned or third-party. If any of those is softer than the script implies, change the script, not the fact.

PART ONE — THE HERO FILM

"TWO ORIGINS. ONE STANDARD."

Running time: 2:45–3:10 **Face:** Yashod, on camera, direct address, throughout. **Grammar:** The continuous walk. Yashod moves; the world changes around him. He does not stop moving until the film tells you to notice that he has stopped.

The structural bet: a single man, walking, whose *register* changes twice while his *ego* never does. Act I he is loud. Act II he is cold. Act III he is quiet. The audience reads that arc as honesty, because braggarts who go quiet are telling the truth.

ACT I — THE OCEAN (0:00 – 1:15)

Tone: swagger. **Unbroken.** **Direct to camera.** **He is enjoying himself.**

VISUAL: Black. Harbour sound. Then Yashod, mid-stride on the wet dock at Vizag, 4am, navigation lights behind him, walking toward camera which retreats ahead of him. He is not dressed for a boardroom. He is dressed for a dock at 4am.

YASHOD:

Look at where I am.

It's four in the morning. It's raining sideways. And I am standing on a dock in Visakhapatnam because a boat is coming in, and I do not trust anybody else to be the first person who touches what's on it.

(a boat lands behind him; he doesn't turn)

The Bay of Bengal is not a supplier. You do not negotiate with it. It does not care about your purchase order, your vessel booking, or your Tuesday.

It gives what it gives. Once.

(he takes a shrimp from a crate, holds it up between two fingers, looks at it, not at us)

So when it gives me this — at its absolute peak, three hours out of the water, colder than your cold room — I have exactly one job.

(now he looks at us)

Do not ruin it.

(beat. He drops it into ice. Turns. Walks.)

Anybody can buy shrimp. I came out here in the dark to meet it.

VISUAL: He walks off the dock and — without a cut — into the intake bay of the plant. Light changes from blue-black to clinical white on his face as he crosses the threshold. The camera stays with him. This is the single most important transition in the film; budget the gimbal rehearsal for it.

THE HINGE (1:15 – 1:30)

He stops. This is the first time he stops. That is the point.

VISUAL: Intake. Two piles forming behind him — accepted, rejected. He stands still between them.

YASHOD:

That was the ocean.

The ocean, I can't argue with.

(he turns, and the camera follows his eyeline out toward the aquaculture ponds — cut, wide, dawn over the Andhra farms)

The pond is different.

The pond, I can argue with. And I do. Every single day.

ACT II — THE POND (1:30 – 2:15)

Tone: inverted. Colder. Slower. Same ego — but now it expresses itself as control, not bravado. He is proud of being difficult.

VISUAL: Pond bund at dawn. Yashod walking the edge, unhurried. Farm technician alongside, water sampling in progress. Nothing pastoral. Nothing warm. This should feel like an audit, not a harvest festival.

YASHOD:

A wild shrimp has a history I can only inspect.

A farmed shrimp has a history I can *own*.

Every pond we take from is registered. Every input logged. Every harvest tied to a batch

number before it ever sees a truck.

(he crouches, takes a water sample from the tech's hand, looks at it)

I know what went into this water. I know what didn't.

(stands. Walks on.)

People in this business talk about traceability like it is a document you produce at the end.

It is not a document. It is a decision you made months ago, in a place nobody was watching, when it would have been cheaper to look away.

(stops. To camera. Flat.)

I don't trust the pond.

That is exactly why you can.

ACT III — THE PROOF (2:15 – 2:45)

Tone: quiet. Specific. The performance drops away entirely. This is the money.

VISUAL: Hard cut. The residue lab. Fluorescent. Sterile. Yashod is standing at the edge of frame now — not centre, for the first time in the film. The lab technician works. Yashod watches her.

YASHOD:

(low, without theatre)

Nitrofurans. Chloramphenicol. Tetracyclines.

Those three words have destroyed more Indian seafood exporters than every storm in the Bay of Bengal put together.

(camera moves to the sample. The instrument. The screen.)

Every batch we ship is tested before it leaves this coast. Not a sample of batches. Every batch. Against EU and US limits, whichever is stricter. Certificate travels with the carton.

(he finally looks at camera. He is not selling now.)

I could have left this part out of the film.

Most people do.

VISUAL: He signs nothing, says nothing further. He simply looks at the QC inspector. She signs the clearance. Hold on her hand.

CLOSE (2:45 – 3:05)

VISUAL: Continuous walk resumes. Yashod moves through cold storage — the racking scale registering behind him — out to the loading bay, and stops at the open door of a reefer container. Daylight. Vizag port beyond.

YASHOD:

Two origins. One standard.

(he puts a hand on the container door)

This one is going to Rotterdam. There is a buyer there who will never meet me, never see this building, and has no reason on earth to take my word for anything.

(he swings the door shut)

So I don't ask him to.

VISUAL: The lock bar comes down. Cut to wide: container ship leaving the Bay. Then black.

ON SCREEN:

SKYLARK EXIM *From the Bay of Bengal to the World's Table. Every step protects a promise.*

HERO FILM — PRODUCTION NOTES (read these before you commit)

1. Screen-test Yashod before a rupee is spent. This entire concept rests on one performance. Old Spice worked because Isaiah Mustafa could hold direct address without blinking or apologising. Half an hour with a camera, a director, and the Act I monologue will tell you everything. If it doesn't land: fall back to Yashod as *voice only*, appearing on camera at the top and the tail. The film survives that. It does not survive an uncomfortable promoter for three minutes.

2. The swagger never touches the safety. Act I and II can be as cocky as he can carry. Act III must not be. If a European food-safety buyer detects flippancy near HACCP or residue, the film has actively cost you money. The rule for the director: *he brags about the hunt, never about the standard.*

3. Brags become warranties. Every claim he makes on camera is a claim your legal

exposure now includes. “Every batch, EU limits” must be literally true and documented, or it comes out.

4. Do not parody. Old Spice has a wink. You cannot afford one. Take the *confidence* and the *direct address* and the *unbroken walk*. Leave the absurdism.

PART TWO — THE NINE PROCESS FILMS

(Narrated. No on-camera promoter. These are the buyer-facing library: trade show loops, WhatsApp sends, RFQ attachments.)

STEP 1 — SOURCING AND RECEIPT

“Two Origins”

50–60 seconds. Bay of Bengal identity.

NARRATION	VISUALS
There is an old truth about the Bay of Bengal that no processing plant can change. What the ocean gives, it gives once.	OPEN ON BLACK. Four seconds of harbour sound only. Ropes. Water. Distant engines.
By 4am the boats are back at Visakhapatnam harbour. The catch has been on ice since the moment it left the water. Not an hour later. That moment.	SLOW REVEAL: Vizag harbour at 4am. Blue-black light. Boats in silhouette, navigation lights on, returning to dock. Shot from water level.
Skylark Exim draws from two origins. The Bay itself. And the aquaculture farms of the Andhra coast, where the history of every shrimp is written down before it is harvested.	CLOSE-UP: a single shrimp transferred from boat to ice. The cold immediately visible. CUT TO: pond bund at dawn. Water sampling. A technician logging a reading.
Wild catch we inspect. Farmed product we can do something better than inspect. We can trace it. Pond of origin. Feed. Inputs. Harvest date. Recorded long before a carton exists.	CLOSE-UP: a pond log book. Entries in sequence. Then a batch tag being applied at harvest.

Both origins arrive at the same door. Both face the same test before they cross it. Freshness. Size. Condition. Batch identity.	CUT TO: the intake area. An inspector holds a shrimp to a light. Not quickly. She turns it. Studies it. Sets it aside. Takes another.
Not everything has passed. The ocean decides what it gives. We decide what earns our name.	CUT TO: two piles forming. Accepted. Rejected. No drama. Just standard. AERIAL: the Bay of Bengal at first light, Andhra coast visible. Hold longer than feels necessary. FADE TO: Skylark wordmark, white on black.

STEP 2 — DESHELLING AND WASHING

"Before Anything Else, Respect"

40–50 seconds. Globally neutral.

NARRATION	VISUALS
The greatest chefs in the world will tell you the same thing. A dish is only as good as how the ingredient was handled before it reached the kitchen.	OPEN: extreme close-up of clean water running. No product yet. Just water. The sound of it.
At Skylark Exim, washing carries more weight than its place in the sequence suggests. Every decision that follows depends on getting this one right.	CUT TO: shrimp entering the washing drum. The water taking them. The rotation beginning.
Product accepted at intake moves immediately into chilled, controlled washing. Clean treated water. Held temperature. Repeated cycles until the water leaving the product runs as clear as the water that first received it.	CLOSE-UP: water moving over product in slow motion. The clarity. The way light moves through clean water.
The freshness a buyer tastes in Osaka. The texture that holds in Rotterdam. The colour that lands in Cairo when a carton is opened. None of that happens by accident.	CUT TO: a worker's gloved hands moving through the washed batch. Feeling for texture. Eyes down. Concentrated.
It starts here, in this room, before the product has been touched by anything except clean water and trained hands.	CUT TO: the water draining after a cycle. Watch it run. Clear. CLOSE-UP: washed shrimp on a draining surface. The difference from intake is visible.

We do not rush this step. What nature perfected, our only responsibility is to protect.

FINAL WIDE: the washing area from above. The rhythm of it. Workers, water, product, in quiet purposeful sequence.

STEP 3 — DE-HEADING, PEELING AND DEVEINING

“Ten Thousand Hours in Every Pair of Hands”

45–55 seconds. Indian craft, globally expressed.

NARRATION	VISUALS
No machine has yet replaced what these hands can do.	OPEN: extreme close-up of a worker's hands at rest on stainless steel. Still. Then they begin.
Along the Andhra coast, the skill of processing seafood passes from person to person the way a language does. Through watching. Through repetition. Through ten thousand small corrections, until the motion becomes instinct.	CLOSE-UP: de-heading. The motion clean and fast. The cut precise. Do not cut away. Watch the whole motion.
HOSO. HLSO. PUD. PTO.	TEXT OVERLAYS, one per line, as each form appears in frame. Clean white type. One second each.
A buyer who names a form is not naming a shape. He is trusting that the vein will lift away clean, that the flesh beneath it will be untouched, and that every piece in every carton will look as though one pair of hands did all of it.	CLOSE-UP: peeling. The shell separating from the flesh in one smooth movement. Slow motion.
That consistency is earned one cut at a time.	EXTREME CLOSE-UP: deveining. The finest moment in the process. The vein lifted away. The pale flesh completely undamaged beneath. Hold this shot.
Each to buyer specification. Each done with the precision that only comes from people who have done this enough times to stop thinking about it.	CUT TO: different workers, different stations. The same motion, different hands. The consistency across the line.

The world eats well tonight because these hands got it right this morning.

FINAL SHOT: a finished tray.
Uniform. The camera holds on it in silence.

STEP 4 — GRADING AND SORTING

“The Number Means Something”

40–45 seconds. Globally neutral.

NARRATION	VISUALS
Somewhere in the world right now, a restaurant has put a dish on its menu.	OPEN: a high-end restaurant table being set. A menu placed. Hands arranging a dish. No dialogue. This is where the grading decision eventually lands.
The price of that dish was calculated around a specific shrimp size. The presentation was designed around it. The promise made to the diner was built on it.	CUT TO: unsorted product arriving at the grading station. A visible mix of sizes.
That restaurant ordered a 21/25. If a 26/30 arrives, the dish does not work. The margin does not hold. The diner notices.	WIDE: the grading conveyor in motion. Product separating into channels. CLOSE-UP: sizes diverging.
Every batch is graded by size, weight and type. Technology separates it. Experience confirms it.	TEXT OVERLAYS as each grade separates: 10/20. 21/25. 26/30. 31/40. 41/50. One second each. CUT TO: a worker sampling manually from a graded tray, checking against a size reference.
The number on the label is not a description of what is inside. It is an agreement we have made with the buyer. We keep it.	CLOSE-UP: a graded tray. Hold. The uniformity is the story. FINAL: cut back to the restaurant dish. The right size on the plate. The dish works.

STEP 5 — QUALITY CONTROL, RESIDUE TESTING AND

INSPECTION

"The Test We Would Rather You Watched"

60–70 seconds. Globally neutral. ***This is the most commercially important film in the set — give it the extra ten seconds.***

NARRATION	VISUALS
Every buyer of Indian seafood carries the same private worry into every negotiation. Most are too polite to say it out loud. So we will.	OPEN: close-up on the QC inspector's face. Eyes on something off-frame. The expression of someone who has seen what passes and what does not.
Antibiotic residue. Nitrofurans. Chloramphenicol. Tetracyclines. Those words have ended more Indian export relationships than any storm in the Bay of Bengal.	HARD CUT: the residue lab. Fluorescent. Sterile. Instruments laid out. Nothing decorative in this frame.
Every batch that leaves this facility is tested. Not a sample of batches. Every batch. Against EU and US maximum residue limits, whichever is stricter.	CLOSE-UP: a sample being prepared. Precise. Unhurried. CLOSE-UP: the instrument running. The screen. The reading.
The certificate does not stay in our file. It travels with the carton.	CLOSE-UP: the residue certificate. Legible. Held for three full seconds. Then placed into the batch file.
Alongside it, quality control runs at every stage of production. Not a final sign-off. A continuous presence. Hygiene. Freshness. Texture. Absence of defects. Every observation recorded. Every decision traceable to the person who made it.	CUT TO: the inspector at a bright inspection lamp, turning a shrimp, taking her time. CUT TO: QC documentation being completed. Every field.
We operate under full HACCP protocol. Every critical control point monitored. Confidence should never depend on faith. It should depend on evidence.	CLOSE-UP: the clearance stamp applied to a batch document. Hold three full seconds.
She does not have the largest office in this building. She does not appear in the company brochure. But every buyer who has ever trusted Skylark Exim trusted her first.	FINAL SHOT: the inspector walking the processing line. Clipboard. Eyes moving. Present at every station.

STEP 6 — FREEZING AND GLAZING

“Where Time Stops”

45–55 seconds. *Bay of Bengal identity.*

NARRATION	VISUALS
The Bay of Bengal does not give its best twice.	OPEN: extreme close-up of a single shrimp. Fresh. Glistening. The texture visible at this scale. Hold four seconds.
The shrimp that came off a boat at Vizag harbour this morning, harvested at its peak, processed with everything we have, will never be this fresh again. So we stop time.	CUT TO: the IQF tunnel. Product entering. The cold visible. Steam rising where warm product meets extreme temperature.
Individually Quick Frozen. Each piece enters the tunnel on its own and reaches its ideal temperature within minutes. The freshness of this morning is preserved, not postponed.	CLOSE-UP: individual shrimp emerging from the tunnel. Each separate. Each in fine frost. Slow motion.
Block freezing protects the products that travel best together. Blast freezing holds larger sea fish — tuna, swordfish, mackerel — to the same discipline.	CUT TO: the temperature display. Hold on the reading. Let it sit. CUT TO: block and blast lines briefly.
After freezing, a fine glaze of clean water is applied. A thin shield. It travels the world with the product and releases cleanly the moment the buyer needs it.	CLOSE-UP: the glazing process in slow motion. The fine mist meeting the frozen surface. The glaze forming on contact. This is the most beautiful shot in the series. Take time with it.
From this point the journey changes. The responsibility does not. The Bay harvested this at its best. We are making sure it arrives that way.	CUT TO: finished IQF product in a tray. Each piece perfect and separate. FINAL AERIAL: the Bay at dawn. Hold. Fade.

STEP 7 — PACKING

"The Last Promise We Make"

40–50 seconds. Globally neutral.

NARRATION	VISUALS
The buyer will never see this room. They will never watch a carton being filled, or a seal being pressed, or a label applied with the care a label deserves.	OPEN: a sealed Skylark carton on a surface. Still. Alone. No context yet. The camera circles it slowly.
They will see the carton. It will arrive in their cold room, and it will be the first physical evidence of everything we told them. The size. The form. The net weight. The origin. The certification.	CUT TO: the packing floor. Workers filling cartons. Each piece placed, not dropped. The deliberateness visible.
A carton is not packaging. It is proof.	CLOSE-UP: a vacuum pack being sealed. The air extracted. The seal pressed. Held. Released.
Every carton filled to specification. Sealed and weighed before it is closed. The label carries the full record: product name, species, size grade, batch number, net weight, pond of origin, country of origin, export compliance.	CLOSE-UP: a label applied to a carton. The camera holds long enough for every field to be legible. Do not rush this shot. CUT TO: a filled carton on a scale. The reading. Confirmed.
When it opens on the other side of the world, someone will either trust us more or trust us less depending on what they find inside. We made that decision here.	CUT TO: a carton sealed. Final tape applied. FINAL WIDE: a completed pallet. Sealed. Labelled. Stacked. Ready. Hold as the narration ends.

STEP 8 — COLD STORAGE

"Not One Degree of Compromise"

35–40 seconds. Globally neutral.

NARRATION	VISUALS
A supply chain has a memory. Every decision made before this moment is either protected here, or undone here.	OPEN: the cold storage doors. Closed. The sound of the refrigeration system. Then the doors open.

The product is packed. The quality is verified. The cold chain has been unbroken since the harbour or the pond it came from.	WIDE: the facility from the entrance. Let the scale register immediately. Rows of racking into the distance. Hold five full seconds. Do not cut.
Minus eighteen to minus twenty degrees Celsius. Seven hundred pallets of capacity. Every batch tracked against its documentation. Every pallet allocated, matched to a shipment, ready the moment a container window opens.	SLOW MOVE: down one aisle. The depth revealing itself. White cartons, orange and blue steel. CLOSE-UP: the temperature display. Minus 18. Minus 20. Three seconds minimum.
Buyers who work with Skylark Exim do not wait for product to be ready. The product is ready. Consistency is not created on the day of shipment. It is preserved every day before it.	CLOSE-UP: a pallet label. Batch number. Buyer allocation. Dispatch date. Legible. CUT TO: a forklift moving a pallet. The facility is working, not staged.
Minus twenty degrees. Seven hundred pallets. Not one degree of compromise.	FINAL WIDE: from the far end looking back toward the entrance. Seven hundred pallets between camera and exit. Hold.

STEP 9 — EXPORT DOCUMENTATION AND LOGISTICS

“From This Shore to Yours”

55–65 seconds. Bay of Bengal identity.

NARRATION	VISUALS
Visakhapatnam has been a port city since before the word export existed. Ships have left this harbour for the world’s markets for centuries. The Bay of Bengal has always known the way.	OPEN: Visakhapatnam harbour at dawn. Wide. Aerial. The Bay stretching to the horizon. Music begins quietly.
Today Skylark Exim adds its name to that history with every container that leaves this coast. But a container does not move on heritage. It moves on paperwork that is correct.	CUT TO: the documentation desk. An export officer at work. Organised. Precise. The package being assembled.
Health certificates. Packing lists. Certificates of origin. Residue certificates. Compliance	CLOSE-UP: a health certificate being completed. The pen moving through the

records. Every document accurate, current, and prepared with the same discipline as the product it represents.	fields. CLOSE-UP: certification documents. HACCP. EIC. Residue clearance. Two seconds each. Legible.
A shipment that fails at customs has failed the buyer as completely as one that fails at quality control.	CUT TO: the loading area. Skylark cartons moving by forklift toward an open reefer. CLOSE-UP: reefer interior. Temperature set. First pallets entering.
The container is sealed. The cold chain holds. The vessel moves into the Bay of Bengal. And something that was in the ocean three days ago begins its journey to a kitchen on the other side of the world.	CUT TO: the container door sealed. A hand on the locking bar pulling it closed. CUT TO: Vizag Port. A container ship at berth. Then moving.
From this shore to yours, nothing is left to chance. Nine steps. Each one earned. So that trust arrives long before the carton is opened. This is Skylark Exim.	AERIAL: the Bay opening up. Andhra coast on one side, open ocean ahead. ON SCREEN: nine numerals, one at a time. Then the wordmark.

APPENDIX — PRODUCTION SUMMARY

Recommended route: hybrid. Real shoot for everything inside the plant and everything a hand touches. Licensed stock or AI for ocean, aerials, and the foreign restaurant table. AI animatic cut *before* the shoot to lock the edit — that alone saves a shoot day.

	Conventional (premium)	AI-only	Hybrid (recommended)
Total, nine films only	₹22–40L	₹4–8L	₹13–21L
Total, including hero film	—	—	₹19–28L
Timeline	8–12 weeks	3–4 weeks	6–8 weeks

Two notes on quotes. Anything above ₹45L is you paying for their brand, not your film. And the VO is where cheap productions die — a synthetic read is now good enough that a ₹2L “international voice” is hard to justify, but a bad Indian-accented-attempting-neutral human read will undo the entire film.

Before any camera rolls, confirm in writing:

1. Cold store capacity of 700 pallets, and whether the facility is owned or third-party.
2. Current HACCP and EIC certification status.
3. That residue testing is genuinely every batch, against EU/US limits, with the certificate travelling with the carton.

Every one of those appears on screen. A film is a permanent record of a claim.
